ROLL-A-DOORS

Dandenong Garage Doors

Squareline Deluxe

The Squareline Deluxe will perform reliably over many years. Fitted with the unique mini groove top sheet, the door's finish is protected from scuffing, ensuring it will continue to look good. The single sized door is available up to 3000mm high and 3140mm wide. For wider openings we have the Squareline Wideline range.

Squareline Wideline

The Squareline Wideline has a curtain shape similar to the Squareline Deluxe, making this range perfect for homes that need both a single and double garage door. The Squareline Wideline is available in sizes from 1200mm to 3000mm high and 2500mm to 5500mm wide.

Traditional Wideline

Featuring a deeper, rounded curtain shape, the Traditional Wideline has a more rigid steel curtain and heavy-duty spring and drums for the lifting mechanism, making this door perfect for higher usage applications, or if an extra strong door is required. Available in sizes from 1250mm to 3000mm high and 2500mm to 5500mm wide.

Series 2 Low Profile

The Roll-A-Door Low Profile has a lighter operation than that of the Roll-A-Door Traditional Wideline and industrial doors. Deeper guides and a more rigid curtain ensure smoother, quieter operation while the door is in motion. Available in 2400mm high and 2000mm to 5500mm wide.

Warranty

7 year warranty for steel door curtain, covering steel cracking and lock seam failure, and associated labour in domestic / residential applications, 12 months on surface coating, locking mechanism and all other components and all associated labour (excludes salt corrosion). 12 months for all components and labour in industrial / commercial applications.

We offer an extensive choice of colours, finishes and design features

We ensure an even horizontal & vertical spacing of panel designs which is critical to the overall appearance of the door.

Tailor made to suit your garage opening perfectly, with equally sized panels. The slick aluminium strip features a lip at the base of the door.

Select from a wide range of panel designs available in either smooth or woodgrain textured finishes.

Grange Standard

The grange door has an attractive wide raised pattern design, for an elegant, uncluttered finish.

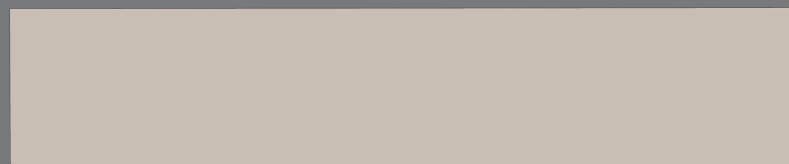

Turino Premium

Turino has five ribs across each panel, giving a shiplap board effect. The space between the ribs across the Turino is fixed. The space between the outside ribs and the panel's horizontal edges varies

Statesman Standard

The elegant Statesman raised pattern design adds a stylish finish to the door that will enhance the appearance of your home.

Nullarbor Smooth Premium

Is a superior flat panel design that creates an attractive clean appearance. Its distinctive minimalist look and strong sharp lines complement the most modern architecture.

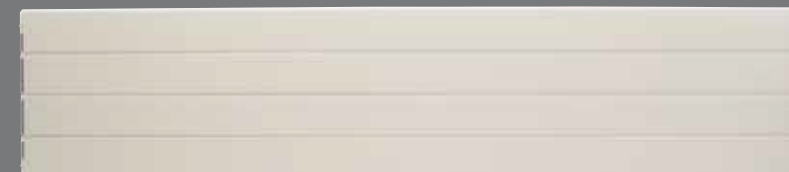

Federation Premium

For homes with a more traditional feel, the Federation style adds another embellishment to the raised pattern of the popular statesman design.

Madrid Premium

Taking the seville a step further, the Madrid is sleek, modern and contemporary in design.

Seville Standard

Seville has fine horizontal ribs across each panel, to provide a slatted look. This design offers a very subdued, contemporary appearance for the modern home.

Nullarbor Woodgrain Textured Standard

Is a superior flat panel design that creates an attractive clean appearance. Its distinctive minimalist look and strong sharp lines complement the most modern architecture.

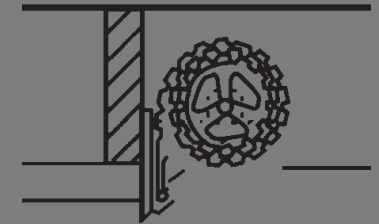

Roller Doors

Roller doors are usually installed behind the door opening, In most instances, timber jambs are necessary and the door is fixed directly to the brickwork.

There should be sufficient room or clearance on each side behind the opening to house the support brackets and track guides with good working clearance.

In most cases, approximately 400mm of head room is required to accommodate the rolled-up curtain. When the door is in the fully opened position, the opening height is normally reduced by approximately 70mm.

A Roller Door can be installed where there is less than the headroom mentioned above, under certain circumstances. In some cases, the door can be installed with the curtain extending down into the opening space, when the headroom is very low a false head or deeper lintel can be installed to improve the appearance of the door.

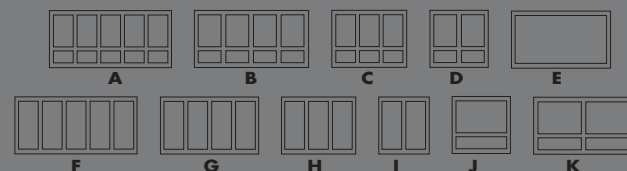

Tilt Doors

This illustration shows the opening and closing of the Jamb and Track type fitting for Tilt operation doors.

When fixed to the Jamb type fitting, the door projects outside the garage door opening when in the open position. This provides a handy canopy outside the garage area. Other advantages of the Jamb fitting include, low overhead clearance, as little as 65mm above doorway is needed for installation and no ceiling fixing is required as the hardware is secured to the door Jambs only.

When Track type hardware is fitted, the door retracts fully into the garage when open. This fitting is weather sealed along the door Jambs and is recommended for wide heavy doors or where a full perimeter seal is required. Track type hardware requires a head clearance as little as 70mm above the doorway.

Raised Moulding Selection for Ply Timber Tilt Doors

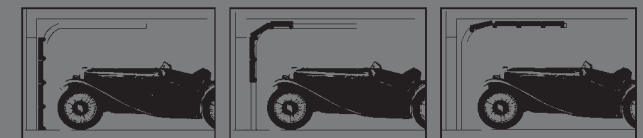

These are just some panel designs available. Ask your Dandenong Garage Doors Sales Representative for more ideas, or design your own.

Sectional Doors

Sectional Garage Door Operation

Optimum operational results are achieved in sectional doors using standard headroom equipment.

Low Headroom equipment can be used under special circumstances for sectional doors where the head room is between 250mm and 150mm. This may occur where there is insufficient headroom, when there is overhead interference such as plumbing fixtures or when maximum opening height is required within the building.
